

Easy Comply Vertical Extension

DESCRIPTION

The Easy Comply Vertical Extension was designed with the 2010 ADA Standards for Accessible Design Section 307.2 Protrusion Limits and NFPA-101 4" Projecting Object Rules in mind. Easy Comply Vertical Extensions can be mounted to almost any surface including walls and structural columns without the need for framing, patching or painting!

Easy Comply Vertical Extensions allow any object the projects more than 4" off of the mounting surface to comply with a variety of projecting object limitations by providing a 4" extension from 27" off of the floor up to the bottom of the desired object. Fire Extinguishers, AED devices and hand sanitizers are good examples, as they are often mounted higher than the allowable height based on their projection from the surface.

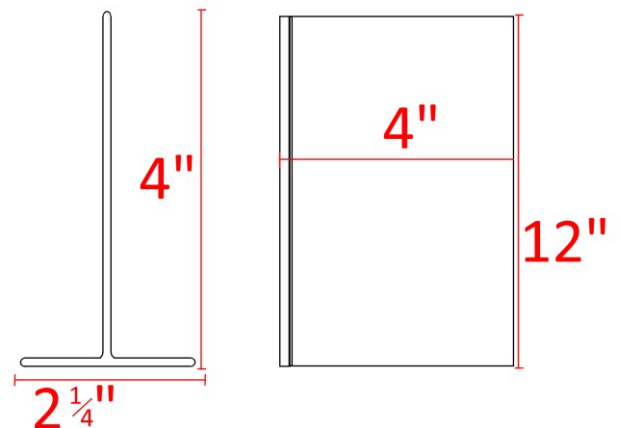

The patent-pending living hinge design allows the extension to rotate 90 degrees in either direction if bumped, safely returning back to center each time!

INSTALLATION

1. Mark the spot for the extension to be mounted.
2. Peel the protective covering off of the adhesive on the back of the extension.
3. Affix the extension to the surface by firmly pressing adhesive to the surface. Optionally, drill 4 holes and affix the extension to the surface with 4 screws for more secure mounting.
